

RGG-M HDPE Geomembrane

Description

RGG-M HDPE geomembrane is a waterproof barrier type material produced from (medium) high density polyethylene resin.

HDPE geomembrane full name "high-density polyethylene film", has excellent environmental stress crack resistance, low temperature resistance, anti-aging, corrosion resistance, and a large operating temperature range (-60~60) and long Service life (50 years).

Advantage

- A flexible waterproof material with high anti-seepage coefficient (1×10^{-17} cm/s).
- Good heat resistance and cold resistance, the ambient temperature is 110°C , low temperature -70°C .
- Very good chemical stability, resistant to strong acid, alkali, oil corrosion is a good anti-corrosion material.
- High tensile strength, which makes it have high tensile strength to meet the needs of high standard engineering projects.
- Very strong weather resistance, strong anti-aging properties, can be used for a long time to maintain the original performance

Application

HDPE geomembrane is suitable for environmental protection and sanitation: such as landfills, sewage treatment plants, power plant conditioning pools, industrial, hospital solid waste, etc.
